A . OUR RESEARCH ACTIVITIES AND PROGRAMS

CENTRE FOR RESEARCH

RECTOR'S OFFICE

TRIBHUVAN UNIVERSITY

Centre for Research at Tribhuvan University (RD-TU), set up in the year 1974, is one of the academic-research oriented administrative Centres located at Tribhuvan University Central Office, Kirtipur. This **Centre for Research, under TU Rector's Office** has been offering its services for the University research activities as the central research-coordinating agency. This Centre works in co-operation and co-ordination with those who do the research at TU and those who want them to do it. The teacher and the student researchers, whom this Centre acts in close proximity with, have a great opportunity to work on various research projects. **In addition, this central level university research coordinating agency also assumes the position of a secretariat of Tribhuvan University Research Coordination and Development Council (TURCDC) from which it receives working policies, guidelines and the directives about the university research.** This Centre is supposed to be mainly involved in the following research related activities:

1. Approving the research requests of national and international/foreign researchers to conduct studies in Nepal;
2. Conduct Mini-Research Projects under Tribhuvan University (TU) for the academic and organizational development of the institution;
3. Evaluation of research proposals and the research reports;
4. Mobilization and distribution of project research grants;
5. Publication of various bulletins, research guides, TU journals, and also that of various important research reports.

In a bid to effectively perform the above mentioned and other related activities the Centre is equipped with appropriate manpower and the resources, even if they are not quite adequate up-to the level of enhanced demands of the present-day research. Nevertheless, we at TU can rightly boast of what we have in hand as the best and the most appropriate of the available research capabilities in the country. **Here is how TU is considered to be the soul of national research excellence, since we have:**

1. **Profusion of research excellence**
2. **National research leadership**
3. **Research facilities that are available**
4. **Rich reference materials**

1. Profusion of research excellence

Tribhuvan University, being the oldest university in the kingdom and also being one among the excessively huge universities in the countries of the SAARC region, has not only opened the gate for higher education in Nepal, it undoubtedly deserves to be the institution of higher education which is dedicated to the nation building by generating the vast number of educated manpower every year to appropriately meet the ever increasing manpower requirements of the nation. It has earned an enviable fame for having delivered highly competitive teaching and research professionals within the country. Virtually considered to be the sole institution of higher education in the country, this university has a rightful claim to have been equipped with highly deserving teaching and research professionals in various subject areas in which specialized level instructional and overall academic activities are performed. At TU, we have very good reason to boast of the delivery of our expert research services on any subject within the designated areas of our institution. Our research services can be delivered from whatever part of our country that the clients wish their services to be delivered.

The researcher is required to adopt a holistic approach to data collection in any educational or social science related research. One might want to perceive the total situation rather than focusing on a few elements within it and record by the appropriate means available. But that is hardly probable in considering the short time at the disposal of an outside researcher. **Delivery of the local research expertise would definitely contribute to the greater validity and reliability of the studies. It is only possible with TU, especially because our campuses, where a reasonable kind and degree of research conveniences with qualified teacher-researchers are available in almost every district of the nation characterized by various geographical, regional to different climatic features.** . These people suitably acclimatized to the particular geographical specialties do not only find it less difficult to visit places than others who are not so much accustomed to the locations as our national geography and its weather pattern vary. They, thus, can make several as well as prolonged visits to check and recheck the facts and figures to ensure that the researchers ultimately come up with the outcomes that are not challenged or even disputed.

2. National research leadership

Tribhuvan University is a leading institution for research, besides it being an institution of higher academic learning. There is no doubt about its outstanding research potential that has been standing unrivaled all through the years. This is the only source of research experts within the nation where the government and non-government agencies both within the country and outside can depend upon for their planning, evaluation and research related endeavors. It is exactly at Tribhuvan University where they would get the genuine talents that they look for. **We, the Centre for Research at TU, are constantly committed to make our clients available the most appropriate kind of talents for the kind of investigative jobs that they prefer us to perform, without letting our talents to interfere, in any way, their regular university duties and obligations.**

Centre for Research at Tribhuvan University has an extensive roster of highly committed teachers-cum- researchers in different socio-economic, political, cultural, business, management,

and scientific and technological areas of study. Many of these researchers, with proven academic credibility, are nationally acclaimed of whom some are even internationally recognized for their outstanding research works. It is on their own technically specialized works of this kind that many local to national level developmental policies and programs are efficiently worked out for better outcome. Many others are used to reflect national approaches at the international forums. **All this goes a long way to deliver findings of the research that affirm to be truly realistic, significantly reliable and precisely dependable, in order that the validity of all this could be always put to test for total authenticity and trustworthiness.**

3. Research facilities that are available

Research facilities at TU Central Campus and those spread all over through the national network of this university are more improved and much easily accessible to all the university researchers. Junior researchers who are important as research assistants are always given appropriate guidance and professional training by the seniors and the highly talented experts as a matter of regular academic exercise. Institutional research facilities, that are made available by the university to different categories of research workers, are:

1. National level Central University Library;
2. Regional and campus level libraries at different campuses throughout the country;
3. A mini-research library at the Centre for Research;
4. Orientations, workshops and seminars on appropriate research methodologies;
5. Regular expert evaluations and feedbacks.

4. Rich reference materials

TU can rightly boast of the rich reference reserve that it has collected from different national and international resources. The trend of pouring in such materials is still going on. TU Central Library is growingly enriched with such supporting materials for research. To this regard the recent donations from INASP and PERI are worth mentioning. Any researcher under the TU system can have access to about 20-25 thousand world-class research journals on-line and free of charge. **This number does not include the printed reference materials that TU Central Library and other TU regional libraries do have with them at present.**

We have a great number of past research documents in our libraries. They are in the forms of Doctoral Dissertations, Master's Theses and Project Reports, besides hundreds of regular journals and periodicals. **Each and every piece of these documents, if used properly, will offer an inquisitive researcher with the abundance of information that he/she wants to have in course of his/her process of academic inquiry.**

In addition, we, at the **Centre for Research-TU** have quite a large number of Village Profiles prepared by the Master's level students under the guidance and supervision of a designated professor or a senior teacher of the university. These profiles contain the data and information on aspects of villages and the life of the people. These base-line studies are conducted by tens of thousands of degree level students covering almost over 4000 village locations. **The subject-wise categorization of their mini-researches is ranged from economics to culture and language, and from politics to science and technology. Altogether around 12,000 bound such village profiles can also be accessible to the university researchers through the previously known NDS documentation section, now under TU Centre for Research. Plan is on to re-arrange them at the T.U. Central Library for better use and upkeep of them.**

Activities Conducted

Under the Functional Management System of Centre for Research, TU, 2052 B. S. this Centre has been responsible to discharge the following activities:

1) Project works

The Centre has been conducting Mini Research Projects from the University students, teachers and the researchers with the basic aims to further help improve the teaching/learning processes at the University.

The Centre is conducting research coordination programs. It is mobilizing research grants from various sources, especially designed for degree level students of T.U. and its teachers. Most of the student centered research projects are conducted in the academic fields of Humanities and Social Sciences and Science and Technology, Education, Law, Management, Medicine, Forestry and Agriculture.

2) Workshops

Besides, coordinating the research activities and making funding for research available to the researchers, the Centre has also conducted various workshops and orientations. Diverse workshop activities are launched to orient and equip both the students and the teachers with the methods of research. These kinds of orientation programs are still continuing.

3) Regional Research Resource Centers (RRC)

In order to equip the Master's and above level students and their teachers at various regionally representative campuses, we, at Centre for Research, have assumed to develop a program of Research Resource Centers (RRC) at different regions of the country. In addition to the broad aim of developing Research Resource Centers (RRC) at different regionally selected campuses throughout the country, the specific objectives as outlined in this project are the following:

- a) To set up a Research Resource Center (RRC) at a suitable campus in every development region in the country
- b) To provide a system of decentralization in the university research so that regional and local level research works to be appropriately conducted by the researchers available at regional or the local campuses;
- c) To go in line with the decentralized public administration and development administrative systems and adequately facilitate them with regular research backed planning and evaluative works;
- d) To enhance the university level research capability to each and every satellite campuses regionally attached to the Research Resource Center RRC-TU by enhancing the resource center connected to the regionally selected campus itself in the beginning.
- e) To help upgrade the standards of teaching and learning throughout TU campuses nationally, regionally and locally.

With these objectives in mind we have tried to initiate the measures for developing research resources that are either not available or not quite efficiently and adequately maintained at the campuses that are selected for the purpose.

Keeping in mind this important and the needful approach to the development of Research Resource Center (RRC-TU), we, first of all, tried to pick up campuses that will be provided with such research facilities. Such campuses will be representative in their own respective region academically, administratively and resource-wise.

4) Acquisition and Distribution of Resources

As important components of Research Resources, we, at Centre for Research, have initiated a program of acquiring the research resources like research level books, journals, magazines, CDs, materials on research methodology and research reports. We are highly thankful to the national, foreign and international agencies for making gracious donations of the materials to us. This Centre at the center has been able to distribute them to various regionally representative campuses so that the materials would be facilitated to teachers, students and other scholars of the respective region. At our initial stages we did that to Mahendra Multiple Campus, Nepalgunj, R.R. Campuses, Janakpur and Birendra Campus, Bharatpur. We have a plan to take this project to western and eastern region too.

5) Publications

a) Research Bulletin

With the objective to disseminate research works conducted by various researchers and the research organizations inside and outside the university, TU Centre for Research has been publishing the Research Bulletin consisted of various researches conducted within the University and outside.

b) T.U. Journal

This Centre has been publishing research oriented articles from various scholars and writers on subject areas appropriate to the University and the improvement of nation's education. The articles need to be duly approved by the T.U, Journal Editorial Board for publication.

c) Statistical Bulletin

This Centre is also publishing statistical profile of diverse university activities in relation to personnel, enrollment, budget and examinations etc. This is the Fourth publication of

its kind. This bulletin has further incorporated the educational statistics outside T.U. to provide the wider knowledge of education in Nepal.

6) Research Library in the Making

This Centre has a relatively well set-up Research Resource Center (RRC) that needs to be promoted to a Central Level Research Resource Center (RRC). Approaches are being made for the acquisition of resources as donations of research-related books, magazines, journals and other such materials. They are all suitably catalogued. This Research Resource Center also has accumulated valuable scholarly works in addition to research works and reports from **various** national and the foreign Scholars. The books, Journals and research papers made available by the following national and international agencies in the recent years are the following :

S.N.	Agency	Subject Area	Quantity
1.	UNESCO	Education , Medicine, Child Education, Literacy, Planning.	202
2.	WHO	Health	54
3.	UNFPA	Population	15
4.	Nepal-Australia Community Resource Management Project.	Community Development, Planning & Program, Natural Resources, Community Forestry.	102
5.
